[a] End-use sector estimates include electricity sales and associated electrical system energy losses.
[b] U.S. total energy and U.S. industrial sector include -17.4 trillion Btu of net imports of coal coke that is not allocated to the states.
[c] Excludes supplemental gaseous fuels.
[d] Excludes fuel ethanol blended into motor gasoline. Fuel ethanol is included in "Renewable Energy."
[e] Includes: Conventional hydroelectric power, biomass (wood and biomass waste, fuel ethanol, and losses and co-products from fuel ethanol production), geothermal, solar thermal and photovoltaic, and wind energy.
[f] Includes the energy losses associated with the generation, transmission, and distribution of the electricity

flowing across state lines. A positive number indicates that more electricity came into the state than went out of the state during the year.
[g] Electricity traded with Canada and Mexico. Calculated by converting net imports in kilowatthours by 3,412 Btu per kilowatthour.
Where shown, (s) = Value less than +0.05 and greater than -0.05 trillion Btu.
Note: Totals may not equal sum of components due to independent rounding.
